Simple Installation 1-2-3!
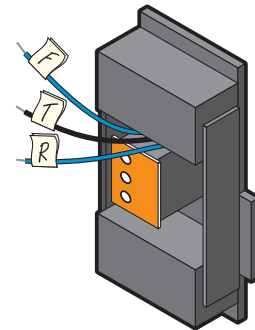

Replacing your Chime Systems step by step

Replacing A Push Button

1. Remove the button from its mounting by backing out its screws.

2. Remove the bell wires from the terminals, and touch wires together to make sure problem is not in the actual chime.

3. If there is no sound, the problem is in your chime, and you should replace it.

Replacing A Door Chime

1. Tag the wires marked "front", "back", and "trans", so you won't mix the wires up.

2. Remove the old chime, buzzer or bell. Install the new chime.

3. Connect the tagged wires to the proper terminals

Replacing A Transformer

1. Purchase transformer with same voltage rating as old one. SHUT OFF POWER TO CIRCUIT!

2. Open adjacent junction box, label bell wires and disconnect them. Disconnect transformer leads inside junction box, and disconnect transformer.

3. Thread new transformer leads inside junction box, fasten transformer to the box, and splice the leads to the wires. Connect the bell wires and test.

For any questions or concerns contact a qualified electrician

Wired Door Chimes

Carlon® Wired Chimes are perfect for new installations or for replacing non-functioning wired systems. For new installation, the following is required: 16-volt, 10VA transformer - Carlon® DH905, Bell Wire - Carlon® DH965. Pushbuttons as needed.

Part #	Color	UPC Code	Carton Quantity	Carton Dimensions (L x W x H)	Case Weight (Lbs)	Case Cube (Cu. Ft.)
