DOOR KNOB ALARM

Mount alarm by hanging on door knob and alarm will sound if the opposite handle is touched by hand or object.

- Ultra loud 100dB alarm
- Self-adjusting sensitivity with manual high and low option
- For all wood and non-metallic doors
- 3 position switch - test for installation, off and alarm
- Uses 9-volt alkaline battery (not included)

INSTALLATION

1. Swing hanger to extended position.
2. Hang alarm on door knob and stop the swinging motion if necessary.
3. Set upper switch to low.
4. Switch unit to test. Wait approximately one minute before testing.
5. Alarm is now ready for test. Touching door knob/handle will activate LED. If not, switch upper switch to high and repeat steps 4-5. **Note:** Door Knob Alarm is designed for all wood and non-metallic doors with metallic door knob handle. It can be used on wood and non-metallic doors with metal door frames too. But the door latch mechanism must be insulated from the door frame. This can be done simply by putting a plastic sheet between the door latch mechanism and the door frame before closing the door.
6. Switch unit to alarm. Wait approximately one minute and the unit is ready.
